EPILOGUE

Between Scepticism and Credulity: In Defence of Hittite Historiography 731
INTRODUCTION
THE THIRTEENTH CENTURY B.C.E.,
THE AGE OF COMPLACENCY

There are no dull periods in history but people usually find some periods
and some topics more exciting than the others. Like most boys, I suppose, I was
first fascinated by heroic figures such as Alexander the Great and Napoleon, but
soon my interest turned to periods of turmoil and disaster, influenced perhaps by
the fate of my own family. What intrigued me most was the question how could
a relatively calm and prosperous period transform, often promptly, into a time
of precariousness and disaster. Were the signs really written on the wall, as it is
often claimed in retrospect, and if so, what could have been done to prevent the
fateful events to come? I spent hours daydreaming what would I have done in
such and such situation and the answers became less and less evident the older I
grew.

As a student of archaeology my initial attraction to periods of crisis natu-
rally steered me into the world of the “Sea Peoples.” One of my first seminar
papers attempted to take stock of the various theories concerning their origins
and destinations, a topic that has continued to captivate me since. However, var-
ious circumstances during my post-graduate studies drew me into the orbit of
another fascinating discipline, Hittitology, which would become the main focus
of my scholarly pursuits for the decades to come. In due time I came to realize
how intimately the two subjects are interconnected; in fact, I believe that only an
integrated study of the two domains, ancient Anatolia and the “Sea Peoples,” can
provide satisfactory answers to some of the pressing questions.

Despite my strong historical inclination, as the topic for my doctoral disserta-
tion I chose, following the advice of my supervisor Professor Heinrich Otten, the
philological study of a large festival text, the KI.LAM. Anatolian religion indeed
proved to have a strong appeal for me, but soon after my return from Marburg to
Israel, the muse Clio lured me back to her discipline in a most persuasive way:
a remarkable Hittite seal impression was found at Tel Aphek, near Tel Aviv, and
the excavator asked me to publish it. This required me to plunge into the intrica-
cies of Hittite glyptics and thirteenth-century international relations in order to
explain how this princely bulla turned up in an Egyptian governor’s residency in
Canaan. This investigation paved the way for my major scholarly pursuit during the next thirty years—the political history of the late Hittite Empire, its means of domination in the Syrian and Anatolian provinces, and its intricate connections with the other contemporary members of the Club of Great Powers—Egypt, Babylonia, Assyria and Ahhiyawa.

The thirteenth century B.C.E. was truly an international age of grandeur and opulence, whose epistolary network extended for the first time also to the Aegean realm, known as Ahhiyawa. To a certain extent the thirteenth century is the natural continuation of the Amarna Age, but now, after the fall of Mittani, the fragile borderlines between the great powers were stabilized and consolidated. This does not mean of course that the new “world order” was readily accepted by all competing hegemonies. On the contrary, some of the fiercest battles in antiquity were fought in this era—between Egypt and Hatti, Hatti and Assyria, Assyria and Babylonia, and Hatti and Ahhiyawa. Yet, these confrontations did not lead to a fundamental change of the geo-political map of the ancient Near East, as the relatively short episodes of enmity and warfare were followed by extended periods of détente and cooperation. With or without official peace treaties, diplomatic contacts between the royal courts flourished, with an opulent exchange of luxury goods, mutual visits of royalty and experts, and marriage alliances tying together the great royal houses. The overall image of the thirteenth-century ancient Near East always reminded me of pre-World War I Europe, with its delicate balance between half a dozen dominating powers, intricately tied together by marriage alliances between their royal houses. The analogy extends into the aftermath of the Great War, when some of the multi-national empires disintegrated into a myriad of nation states.

I have designated this period as “The Age of Complacency” because underneath the façade of splendor and stability lurked strong destabilizing forces that were either ignored or unsuitably fended off by the self-confident emperors and their advisers. Each great power had its own set of inner problems, but, upon closer examination, they all shared similar difficulties: interneceine rifts within the royal houses, schisms within the ruling elites, regional attempts to secede from central rule, overextended supply lines, and restless ethnic groups operating on the fringes of the states, increasingly undermining the authority of the central powers: Arameans on the fringes of Assyria and Babylonia, nomadic Shasu groups in Egyptian Canaan, and “Sea Peoples” subverting both Hittite and Ahhiyawan control in western Anatolia. These unconventional forces proved to be the hardest to deal with. The great powers knew how to recruit enormous armies and resources in order to fight each other, but when it came to dealing with these elusive rebels on the fringes of the kingdom they were at a loss. Repeated campaigns to quell the insurrections turned increasingly ineffective.
The boastful great kings had fatally underestimated the detrimental forces of disintegration, which intensified towards the end of the century because of an increasing shortage in basic food supplies. Instead, they poured immense resources into extravagant building projects and cult reforms: grandiose new capitals were built at Piramesse, Kar-Tukulti-Ninurta and Tarhuntassa, and numerous new temples were erected throughout the kingdoms while others were lavishly renovated. Especially in Hatti self-aggrandizement and accreditation of divine status to the Great King seem to have increased in inverse proportion to the actual political clout of the central power. It is hard for us to understand whether such frivolous excesses resulted from obliviousness to the gravity of the situation, or, on the contrary, through such lavish means the troubled rulers tried to camouflage their military and economic failures and to call the attention and the support of their gods. Extreme piety is typical for times of dire straits. The costly cult reforms undertaken by the last kings of Hatti also concealed a deep sense of malaise and remorse caused by Hattusili’s usurpation of the throne and the ensuing schism between two branches of the royal house.

The forty-two articles assembled in this volume were written over a period of thirty-five years and, understandably, they exhibit different levels of updating. Yet, I believe that by and large they can still provide a coherent picture of this fascinating era. There have not been any major archival discoveries pertaining to this period, on a par with the Boğazköy or the Ras Shamra archives, though several smaller and less spectacular thirteenth-century tablet collections were found at sites such as Meskene/Emar, Tell Sheikh Hamad/Dur-Katlimmu, and Tell Chuera/Harbe in Syria, and at Tel Aphek/Antipatris in Israel. The integration of the new textual data is steadily expanding our understanding of the period, but quantum leaps in the interpretation of the evidence are quite few.

More abundant are the latest archaeological discoveries throughout the ancient Near East and the Aegean, in particular those pertaining to the end of the period, that is, the transition from the Bronze Age to the Iron Age. Despite the paradigmatic shifts in the interpretation of the evidence propagated by some “processual archaeologists” (“indigenist” or “anti-migrationist” theories), I still conceive of this period as one characterized by large-scale upheavals, some of them bearing a cataclysmic character. In addition to the internal breakdown of the imperial systems and the palace economies of the Late Bronze Age, the ultimate collapse of the delicate thirteenth century equilibrium, in particular of the Hittite Empire, was accelerated by a severe famine, probably affected by natural causes such as prolonged periods of drought. These drastic circumstances, which find

---

1. Regrettably, two important archives of the thirteenth century B.C.E., each with some 400 tablets, still remain unpublished: the bulk of the so-called Urtenu archive at Ugarit (found in 1994) and the Middle Assyrian texts from Tell Sabi Abyad (found in 1997–1998).
growing support also in climatological studies, in addition to the explicit textual evidence, set off a cascade of population movements across large parts of the central and the eastern Mediterranean Basin. The “Sea Peoples” in general, and the Philistines in particular, remained a second focus of my scholarly interests over the past thirty years, but this enthralling subject is only marginally touched upon in this volume, the focus of which is the thirteenth century B.C.E., “the calm before the storm.”

I wish to thank Billie Jean Collins for her dedication, time and effort invested in editing this volume, and to the SBL for accepting it in the Writings from the Ancient World Supplement Series.
